Project Overview

This UX case study focuses on improving the internship application tracking experience for first-year students on LinkedIn. The goal is to reduce confusion, improve organisation, and help students manage applications more effectively.

10 first and second-year engineering students participated in the survey.

Objective

To understand the challenges students face while searching, applying, and tracking internships on LinkedIn.

Research Method

A Google Form survey was conducted among first and second-year students to identify common pain points, behaviors, and expectations related to internship applications.

Key Findings

Students struggle to track internship applications effectively.

Many users rely on Notes, Notion, memory, or spreadsheets.

First-year students often feel overwhelmed by LinkedIn.

Internship recommendations are sometimes irrelevant.

Students want reminders, progress tracking, and a centralized dashboard.

Design Opportunity

To redesign LinkedIn's internship application tracking experience for beginner students by making it more organized, beginner-friendly, and less overwhelming.

User Persona

Aditya

18 years old | 1st Year BTech CSE Student

Bio

Aditya is a first-year engineering student actively exploring internships to gain experience and build skills. He frequently uses LinkedIn but struggles to stay organized while applying.

Goals

- Find beginner-friendly internships
- Track applications easily
- Stay organized during the application process

Pain Points

- Overwhelming interface
- Forgetting application statuses
- Difficulty finding relevant internships
- Managing resumes and links separately

Behaviors

- Saves internship posts frequently
- Uses Notes app to track applications
- Applies inconsistently due to confusion

Quote

“Applying is easy, tracking everything is not.”

Affinity Mapping

Next Steps

- High Fidelity UI design
- Clickable prototype in Figma
- Usability testing with first-year students
